

Say NO to Coal in Nevada!

Join Senator Reid to Talk About a Clean Energy Economy -National Clean Energy Summit 2.0

WHEN: August 10th 2009

WHERE: University of Nevada, Las Vegas, Cox Pavilion

WHAT: High-level industry leaders, scientists, policy experts, and public officials, along with citizens and the media, will gather in Nevada for a day-long summit hosted by the Center for American Progress Action Fund, U.S. Senate Majority Leader Harry Reid (D-NV), and the University of Nevada, Las Vegas. This year's summit will bring together the nation's top minds including former Vice President Al Gore, energy executive T. Boone Pickens, White House Council on Environmental Quality Special Advisor Van Jones, Nevada State AFL-CIO executive Danny Thompson, and many others to chart a course for our nation's clean energy future.

WHY: 2009 provides a pivotal opportunity for our nation to come together to define a policy agenda that accelerates the deployment of clean energy and energy efficiency, creates good jobs, advances energy independence, and ensures long term economic prosperity for Nevada, the nation, and the world. We hope you will join the conversation.

Nevada is at the epicenter in the debate of how America should generate and use energy in the future. Nevada has abundant clean energy sources such as solar, wind, geothermal, and efficiency technologies that could be developed to meet its future energy needs. The question is whether Nevadans—and all Americans—will shift to a clean energy economy that creates less expensive and more efficient energy, cleaner air, clean energy markets, and the creation of good new jobs that strengthen and grow our economy in Nevada, the nation, and the world.

We owe it to our children and grandchildren to protect the air they breathe and our nation's great outdoors. Nevada has the opportunity to do that and lead the nation in a clean energy revolution by developing clean, renewable energy and efficiency technologies that will meet the state's current and future energy demands.

Once again, America can lead the way. Developing new technologies will result in a robust clean energy economy our country can be proud of while creating good-paying jobs and diversifying our economy while not

polluting our air.

This is our vision for America's future. And the National Clean Energy Summit is a pivotal opportunity to help get us there.
